Lesson Planning

Complete Lesson Plan Book

Class: Class 5

Subject: Mathematics

Medium: English

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: Multiplication of Two-Digit Numbers by One Digit

DM

Unit 1: Multiplication of Two-Digit Numbers by One Digit

Learning Objectives

• Students will multiply a two-digit number by a one-digit number using the standard method.

• Students will explain the carrying step using place value.

• Students will solve word problems that need two-digit by one-digit multiplication.

Key Concepts

• Multiplication is repeated addition: 23 × 4 means 23 added four times.

• A two-digit number can be split into tens and ones to make multiplication easier: 23 × 4 = (20 × 4) + (3 × 4).

• When the ones multiply to 10 or more, we carry the tens to the next column.

• Place value tells us where each digit belongs: ones, tens, hundreds.

• Checking by estimation helps us catch mistakes in multiplication.

Teaching Methodology (Step by Step)

1. The teacher asks students to solve 3 × 4 by repeated addition and reminds them that multiplication is fast addition.

2. The teacher writes 23 × 4 on the board and splits 23 into 20 and 3, multiplying each part separately.

3. The teacher shows the standard vertical method and explains how 3 × 4 = 12 gives 2 ones and 1 ten to carry.

4. The teacher works through 47 × 5 step by step, showing the carrying of tens clearly.

5. The teacher gives the class three sums to try on their slates and checks answers together.

6. The teacher reads a shop word problem and shows how multiplication finds the total cost.

Classroom Activities

• Digit race: groups race to solve two-digit by one-digit multiplications on the board.

• Real-life shop: students work out the total cost of buying several items at a given price.

• Place-value puzzle: students break a two-digit number into tens and ones, then multiply each part.

Assessment Questions

1. Work out 23 × 4 and show the carrying step.

2. A packet has 36 pencils. How many pencils are in 7 packets?

3. Explain in one sentence why we carry the tens when multiplying 47 × 5.

Homework

• Solve ten two-digit by one-digit multiplications and check each answer by estimation.

• Write two word problems of your own using two-digit by one-digit multiplication.

Time Allocation

40 minutes
