Lesson Planning

Complete Lesson Plan Book

Class: Class 5

Subject: Science

Medium: English

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: The Water Cycle: How Water Travels Around the Earth

DM

Unit 1: The Water Cycle: How Water Travels Around the Earth

Learning Objectives

• Students will name the four stages of the water cycle in order.

• Students will explain how the Sun drives evaporation.

• Students will describe where rain comes from and where it goes.

Key Concepts

• The water cycle is the journey water takes again and again between the Earth and the sky.

• Evaporation happens when heat from the Sun turns liquid water from rivers, lakes and seas into invisible water vapour.

• Condensation happens when water vapour cools high in the sky and changes back into tiny water drops that form clouds.

• Precipitation is water falling back to Earth as rain, snow or hail.

• Collection is water gathering in rivers, lakes, seas and underground, ready to evaporate again.

Teaching Methodology (Step by Step)

1. Ask students where the water in a puddle goes on a hot sunny day.

2. Draw the water cycle on the board with four labelled arrows: evaporation, condensation, precipitation, collection.

3. Explain the Sun's job as the engine of the cycle and why clouds form only when air cools.

4. Tell the story of one drop of water travelling from a river to a cloud to a mountain and back.

5. Ask students to point out each stage in a picture of hills, sea and clouds.

Classroom Activities

• Cycle in a bag: seal a little water in a clear bag on a sunny window and watch drops form.

• Act it out: four groups play the Sun, a cloud, rain and a river in a short role play.

• Draw and label: each student draws the water cycle and labels all four stages.

Assessment Questions

1. List the four stages of the water cycle in the correct order.

2. What makes water evaporate from a lake?

3. Why do clouds form high in the sky instead of near the ground?

Homework

• Draw the water cycle at home and label each stage in your own words.

• Write two ways your family saves water at home.

Time Allocation

40 minutes
