# Lesson Planning

## Complete Lesson Plan Book

**Class: I.Com · Class 12**

**Subject: Accounting**

**Medium: English**

Academic Year 2026-27

DM

This book is prepared as a teaching guide for teachers.

# Table of Contents

Unit 1: Bank Reconciliation Statement: Purpose and Preparation

DM

# Unit 1: Bank Reconciliation Statement: Purpose and Preparation

## Learning Objectives

• Students will explain what a bank reconciliation statement is and why it is prepared.

• Students will identify the common causes of differences between the cash book and the bank statement.

• Students will prepare a simple bank reconciliation statement from given figures.

## Key Concepts

• A bank reconciliation statement is a statement that explains the difference between the balance in the cash book and the balance in the bank statement.

• The statement is prepared at the end of a period, usually monthly, to check that the business records agree with the bank records.

• Cheques issued but not yet presented reduce the bank balance only when the bank pays them, so they appear as a timing difference.

• Cheques deposited but not yet cleared increase the bank balance only after the bank collects them.

• Bank charges and direct deposits are recorded by the bank first, so the business must update its cash book after learning about them.

## Teaching Methodology (Step by Step)

1. Ask students why a shopkeeper's cash book and the bank statement rarely show the same balance.

2. Define the bank reconciliation statement and explain that it is prepared to find and explain differences.

3. Explain timing differences with the example of a cheque issued but not yet presented.

4. Explain recording differences such as bank charges and direct deposits made by a customer.

5. Work through one full example on the board, step by step, from the cash book balance to the bank balance.

6. Give students a short set of figures and ask them to prepare the statement themselves, then summarise the method.

## Classroom Activities

• Statement hunt: students take a sample bank statement and a cash book extract and spot three differences between them.

• Cause sort: students sort a list of causes into 'timing difference' and 'recording error' groups.

• Prepare together: in pairs, students prepare a short bank reconciliation statement from given figures.

## Assessment Questions

1. What is a bank reconciliation statement, and why is it prepared?

2. Name two timing differences that cause the cash book and the bank statement to disagree.

3. The cash book shows Rs 50,000 and an unpresented cheque is Rs 8,000. What is the adjusted bank balance?

## Homework

• List five items that commonly appear in a bank reconciliation statement and state whether each is added or deducted.

• Prepare a bank reconciliation statement from the figures given in the textbook exercise on page 1 of this chapter.

## Time Allocation

40 minutes
