Lesson Planning

Complete Lesson Plan Book

Class: Class 6

Subject: Science

Medium: English

Academic Year 2026-27

DM

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: Cells: Building Blocks of Life

Unit 2: The Digestive System

Unit 3: Photosynthesis in Plants

Unit 4: Electricity and Simple Circuits

Unit 5: Magnets and Magnetism

Unit 6: The Water Cycle

Unit 7: Air and the Atmosphere

Unit 8: Pollution and Our Environment

DM

Unit 1: Cells: Building Blocks of Life

Learning Objectives

• Students will be able to define a cell.

• Students will be able to name the main parts of a cell.

• Students will be able to state that the cell is the unit of life.

Key Concepts

• Cell: smallest unit of living things.

• Parts: cell wall, cell membrane, nucleus, cytoplasm.

• Nucleus controls the cell.

• Seen with a microscope.

Teaching Methodology (Step by Step)

1. Begin with a 5-minute warm-up: ask 2-3 oral questions revising the previous lesson and linking it to Cells: Building Blocks of Life.

2. Present the key ideas of Cells: Building Blocks of Life on the board with one clear example or a labelled diagram.

3. Explain each point slowly in simple words, asking a short check-question after every point.

4. Do guided practice: solve 3-4 examples of Cells: Building Blocks of Life together, inviting students to complete steps on the board.

5. Close with a 5-minute oral recap in which students state one new thing they learned about Cells: Building Blocks of Life.

Classroom Activities

• Cell model: students make a cell from clay with labelled parts.

• Microscope view: observe a prepared slide of onion cells.

Assessment Questions

1. What is a cell?

2. Name three parts of a cell.

3. Which part of the cell controls its activities?

Homework

• Draw a plant cell and label four parts.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 2: The Digestive System

Learning Objectives

• Students will be able to name the organs of the digestive system in order.

• Students will be able to state the function of each organ.

• Students will be able to explain the importance of chewing food well.

Key Concepts

• Mouth: chewing and saliva start digestion.

• Food pipe carries food to the stomach.

• Stomach churns food; small intestine absorbs nutrients.

• Large intestine absorbs water; undigested food leaves the body.

Teaching Methodology (Step by Step)

1. Start with rapid-fire mental revision: 5 quick questions from the last lesson connected to The Digestive System.

2. Demonstrate The Digestive System step by step on the board while students watch, listen and copy.

3. Move to guided practice: students attempt 2-3 similar items with the teacher's support.

4. Give independent practice: a short written task on The Digestive System completed individually in notebooks.

5. Check a few notebooks on the spot, correct common mistakes on the board and summarise The Digestive System.

Classroom Activities

• Journey map: students trace food's path on a body diagram.

• Chew test: students chew bread slowly and note taste change.

Assessment Questions

1. Name the organs of the digestive system in order.

2. What is the function of the small intestine?

3. Why should we chew food well?

Homework

• Draw the digestive system and label its organs.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 3: Photosynthesis in Plants

Learning Objectives

• Students will be able to define photosynthesis.

• Students will be able to name the raw materials of photosynthesis.

• Students will be able to write the word equation of photosynthesis.

Key Concepts

• Photosynthesis: plants make food using sunlight.

• Raw materials: water, carbon dioxide, sunlight.

• Chlorophyll traps sunlight; product: glucose and oxygen.

• Word equation: water + carbon dioxide -> glucose + oxygen.

Teaching Methodology (Step by Step)

1. Open with a hook: a short story, riddle or real-life example that introduces Photosynthesis in Plants.

2. Lead a class discussion on Photosynthesis in Plants with 4-5 guiding questions; record key answers on the board.

3. Organise the main activity in pairs or small groups according to the plan for Photosynthesis in Plants.

4. Let groups share their work; add corrections and the important points of Photosynthesis in Plants.

5. Finish with a quick oral or written check on Photosynthesis in Plants and announce the homework.

Classroom Activities

• Leaf test: test a leaf for starch after sunlight exposure.

• Equation cards: arrange word cards into the photosynthesis equation.

Assessment Questions

1. What is photosynthesis?

2. Name the raw materials needed for photosynthesis.

3. Write the word equation of photosynthesis.

Homework

• Draw a leaf showing photosynthesis with labels.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 4: Electricity and Simple Circuits

Learning Objectives

• Students will be able to name the parts of a simple circuit.

• Students will be able to make a simple circuit that lights a bulb.

• Students will be able to explain open and closed circuits.

Key Concepts

• Circuit parts: cell, bulb, wires, switch.

• Closed circuit: complete path, bulb glows.

• Open circuit: broken path, bulb off.

• Conductors and insulators.

Teaching Methodology (Step by Step)

1. Begin with 5 minutes of silent or loud reading connected to Electricity and Simple Circuits.

2. Explain the new words and key ideas of Electricity and Simple Circuits; write difficult words with meanings on the board.

3. Read the passage or examples of Electricity and Simple Circuits together, with students taking turns.

4. Students complete a short written exercise on Electricity and Simple Circuits in their notebooks.

5. Review the answers together, praise good work and give a brief summary of Electricity and Simple Circuits.

Classroom Activities

• Build it: groups make a working circuit with a cell and bulb.

• Conductor test: test 5 materials to see which complete the circuit.

Assessment Questions

1. Name the parts of a simple circuit.

2. What is the difference between an open and a closed circuit?

3. Name two conductors and two insulators.

Homework

• Draw a labelled diagram of a simple circuit.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 5: Magnets and Magnetism

Learning Objectives

• Students will be able to state that magnets attract iron.

• Students will be able to identify the poles of a magnet.

• Students will be able to show that like poles repel.

Key Concepts

• Magnet attracts iron, nickel, cobalt.

• Two poles: north and south.

• Like poles repel; unlike poles attract.

• Uses: compass, fridge doors, toys.

Teaching Methodology (Step by Step)

1. Begin with a 5-minute warm-up: ask 2-3 oral questions revising the previous lesson and linking it to Magnets and Magnetism.

2. Present the key ideas of Magnets and Magnetism on the board with one clear example or a labelled diagram.

3. Explain each point slowly in simple words, asking a short check-question after every point.

4. Do guided practice: solve 3-4 examples of Magnets and Magnetism together, inviting students to complete steps on the board.

5. Close with a 5-minute oral recap in which students state one new thing they learned about Magnets and Magnetism.

Classroom Activities

• Pole test: students find which pole combinations attract or repel.

• Treasure hunt: find hidden iron objects with a magnet.

Assessment Questions

1. Which materials does a magnet attract?

2. Name the two poles of a magnet.

3. What happens when two north poles come close?

Homework

• List 5 uses of magnets at home.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 6: The Water Cycle

Learning Objectives

• Students will be able to define the water cycle.

• Students will be able to name the stages: evaporation, condensation, precipitation.

• Students will be able to draw and label the water cycle.

Key Concepts

• Evaporation: water becomes vapour from seas.

• Condensation: vapour forms clouds.

• Precipitation: rain, snow, hail fall.

• The cycle repeats continuously.

Teaching Methodology (Step by Step)

1. Start with rapid-fire mental revision: 5 quick questions from the last lesson connected to The Water Cycle.

2. Demonstrate The Water Cycle step by step on the board while students watch, listen and copy.

3. Move to guided practice: students attempt 2-3 similar items with the teacher's support.

4. Give independent practice: a short written task on The Water Cycle completed individually in notebooks.

5. Check a few notebooks on the spot, correct common mistakes on the board and summarise The Water Cycle.

Classroom Activities

• Cycle wheel: students make a rotating wheel of the water cycle stages.

• Condensation demo: observe droplets on a cold glass.

Assessment Questions

1. What is evaporation?

2. Name the three main stages of the water cycle.

3. What is precipitation? Give two examples.

Homework

• Draw and label the water cycle.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 7: Air and the Atmosphere

Learning Objectives

• Students will be able to state the composition of air.

• Students will be able to explain the importance of oxygen.

• Students will be able to describe two properties of air.

Key Concepts

• Air: nitrogen 78%, oxygen 21%, other gases 1%.

• Oxygen needed for breathing and burning.

• Air has weight and takes up space.

• Atmosphere: the blanket of air around Earth.

Teaching Methodology (Step by Step)

1. Open with a hook: a short story, riddle or real-life example that introduces Air and the Atmosphere.

2. Lead a class discussion on Air and the Atmosphere with 4-5 guiding questions; record key answers on the board.

3. Organise the main activity in pairs or small groups according to the plan for Air and the Atmosphere.

4. Let groups share their work; add corrections and the important points of Air and the Atmosphere.

5. Finish with a quick oral or written check on Air and the Atmosphere and announce the homework.

Classroom Activities

• Air has weight: balance two balloons, burst one, observe tilt.

• Breathing count: count breaths per minute at rest and after exercise.

Assessment Questions

1. Name the two main gases in air with percentages.

2. Why is oxygen important?

3. Give two properties of air.

Homework

• Write 5 lines on why clean air is important.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 8: Pollution and Our Environment

Learning Objectives

• Students will be able to define pollution.

• Students will be able to name types: air, water, land and noise pollution.

• Students will be able to suggest three ways to reduce pollution.

Key Concepts

• Pollution: harmful substances in the environment.

• Air: smoke; water: waste in rivers; land: litter; noise: loud horns.

• Causes: factories, vehicles, plastic.

• Solutions: plant trees, reduce plastic, save water.

Teaching Methodology (Step by Step)

1. Begin with 5 minutes of silent or loud reading connected to Pollution and Our Environment.

2. Explain the new words and key ideas of Pollution and Our Environment; write difficult words with meanings on the board.

3. Read the passage or examples of Pollution and Our Environment together, with students taking turns.

4. Students complete a short written exercise on Pollution and Our Environment in their notebooks.

5. Review the answers together, praise good work and give a brief summary of Pollution and Our Environment.

Classroom Activities

• Pollution survey: students list pollution sources around the school.

• Clean drive: class cleans one corner of the school ground.

Assessment Questions

1. What is pollution?

2. Name four types of pollution with one cause each.

3. Suggest three ways to reduce air pollution.

Homework

• Make a poster: Say No to Plastic.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.
