Lesson Planning

Complete Lesson Plan Book

Class: Class 2

Subject: Mathematics

Medium: English

Academic Year 2026-27

DM

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: Numbers to 100

Unit 2: Place Value: Tens and Ones

Unit 3: Adding Two-Digit Numbers

Unit 4: Subtracting Two-Digit Numbers

Unit 5: Tables of 2 and 3

Unit 6: Measurement: Length and Weight

DM

Unit 1: Numbers to 100

Learning Objectives

• Students will count from 1 to 100 in order.

• Students will read and write any number up to 100.

• Students will tell which of two numbers is bigger.

Key Concepts

• Numbers continue in order up to 100.

• After 99 comes 100, which is three digits.

• Tens come as 10, 20, 30 up to 100.

• Bigger numbers have more tens.

Teaching Methodology (Step by Step)

1. The teacher shows the number chart 1 to 100.
2. Students count aloud together from 1 to 100.
3. The teacher points at random numbers for reading practice.
4. Students write missing numbers in chart gaps.
5. Students compare pairs of numbers with bigger and smaller signs.

Classroom Activities

• Hundred chart race: find and colour the asked numbers.

• Count classroom objects in tens up to 100.

Assessment Questions

1. Read these numbers: 47, 82, 100.
2. Which is bigger: 56 or 65?
3. Write the numbers from 91 to 100.
4. What comes after 79?

Homework

• Write numbers 1 to 100 in your notebook.

Time Allocation

5 periods of 35 minutes each.

DM

Unit 2: Place Value: Tens and Ones

Learning Objectives

• Students will tell the tens and ones in a two-digit number.

• Students will build numbers with tens sticks and ones.

• Students will write numbers in expanded form like 40 + 5.

Key Concepts

• In 45, the 4 means four tens and the 5 means five ones.

• Ten ones make one ten.

• The tens digit stands on the left, ones on the right.

• Place value tells the real worth of each digit.

Teaching Methodology (Step by Step)

1. The teacher builds 34 with three ten-sticks and four ones.
2. Students repeat: three tens and four ones make 34.
3. Students build numbers on their desks with sticks.
4. The teacher writes numbers in expanded form on the board.
5. Students write five numbers in expanded form.

Classroom Activities

• Build the number: the teacher says it, students build it.

• Place value bingo with tens and ones cards.

Assessment Questions

1. How many tens and ones are in 58?
2. Build 73 with sticks.
3. Write 62 in expanded form.
4. Which digit is in the tens place in 49?

Homework

• Write five numbers in expanded form at home.

Time Allocation

5 periods of 35 minutes each.

DM

Unit 3: Adding Two-Digit Numbers

Learning Objectives

• Students will add two-digit numbers without carrying.

• Students will add two-digit numbers with carrying.

• Students will solve word problems using addition.

Key Concepts

• We add ones first, then tens.

• 14 + 23 = 37: ones 4 + 3 = 7, tens 1 + 2 = 3.

• When ones make ten or more, we carry one ten.

• 27 + 15 = 42: we carry one ten to the tens.

Teaching Methodology (Step by Step)

1. The teacher solves 24 + 31 on the board step by step.
2. Students solve similar sums on their slates.
3. The teacher introduces carrying with 28 + 13.
4. Students practise carrying sums with sticks.
5. Students solve word problems in pairs.

Classroom Activities

• Shop game: add the prices of two toys.

• Addition relay: teams solve sums on the board.

Assessment Questions

1. Solve: 35 + 42.
2. Solve: 29 + 17.
3. Add: 48 + 25.

Homework

• Solve five two-digit addition sums at home.

Time Allocation

5 periods of 35 minutes each.

DM

Unit 4: Subtracting Two-Digit Numbers

Learning Objectives

• Students will subtract two-digit numbers without borrowing.

• Students will subtract two-digit numbers with borrowing.

• Students will solve word problems using subtraction.

Key Concepts

• We subtract ones first, then tens.

• 47 - 23 = 24: ones 7 - 3 = 4, tens 4 - 2 = 2.

• When ones are too small, we borrow one ten.

• 52 - 27 = 25: we borrow to make the ones bigger.

Teaching Methodology (Step by Step)

1. The teacher solves 56 - 32 on the board step by step.
2. Students solve similar sums on their slates.
3. The teacher introduces borrowing with 43 - 28.
4. Students practise borrowing sums with sticks.
5. Students solve word problems in pairs.

Classroom Activities

• Take-away shop: buy and find the change.

• Subtraction bowling with numbered pins.

Assessment Questions

1. Solve: 68 - 34.
2. Solve: 51 - 27.
3. There were 45 birds, 18 flew away. How many left?
4. Subtract: 73 - 46.

Homework

• Solve five two-digit subtraction sums at home.

Time Allocation

5 periods of 35 minutes each.

DM

Unit 5: Tables of 2 and 3

Learning Objectives

• Students will recite the table of 2 up to 2 x 10.

• Students will recite the table of 3 up to 3 x 10.

• Students will use the tables to solve simple problems.

Key Concepts

• The table of 2 gives even numbers: 2, 4, 6, 8.

• 2 x 5 = 10 means two taken five times.

• The table of 3 goes 3, 6, 9, 12.

• Tables make multiplication fast and easy.

Teaching Methodology (Step by Step)

1. The teacher builds the table of 2 with pairs of objects.
2. Students recite the table of 2 in chorus.
3. The teacher builds the table of 3 with groups of three.
4. Students recite the table of 3 in chorus.
5. Students solve quick oral questions from both tables.

Classroom Activities

• Table songs: sing the tables with clapping.

• Table race: teams answer table questions the fastest.

Assessment Questions

1. Recite the table of 2.
2. What is 3 x 7?
3. How much is 2 x 9?
4. If one box has 3 pencils, how many in 4 boxes?

Homework

• Write the tables of 2 and 3 twice.

Time Allocation

5 periods of 35 minutes each.

DM

Unit 6: Measurement: Length and Weight

Learning Objectives

• Students will compare long and short objects.

• Students will compare heavy and light objects.

• Students will measure length with hand spans and pencils.

Key Concepts

• Length tells how long something is.

• We can measure with hand spans, feet and pencils.

• Weight tells how heavy something is.

• A stone is heavy, a feather is light.

Teaching Methodology (Step by Step)

1. The teacher compares a long and a short pencil.
2. Students find long and short objects in the classroom.
3. Students measure the desk with hand spans.
4. The teacher compares heavy and light objects by lifting.
5. Students sort objects into heavy and light groups.

Classroom Activities

• Measure the classroom with footsteps.

• Heavy or light: sort the objects in the basket.

Assessment Questions

1. Which is longer: your arm or your pencil?
2. Name one heavy and one light thing.
3. Measure your book with hand spans.
4. Is a brick heavy or light?

Homework

• Measure three things at home with hand spans.

Time Allocation

4 periods of 35 minutes each.
