Lesson Planning

Complete Lesson Plan Book

Class: Class 4

Subject: Science

Medium: English

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: The Water Cycle

DM

Unit 1: The Water Cycle

Learning Objectives

• Students will name the four stages of the water cycle in the correct order.

• Students will explain how the sun's heat starts the water cycle.

• Students will describe where rainwater goes after it falls on land.

Key Concepts

• The water cycle is the journey of water as it moves between the Earth and the sky, again and again.

• Evaporation happens when the sun heats water in seas, rivers and lakes and turns it into invisible water vapour.

• Condensation happens when water vapour rises, cools in the sky and changes back into tiny water drops that form clouds.

• Precipitation is when water falls from clouds as rain, snow or hail.

• Collected water runs into rivers and seas or sinks into the ground, and then the cycle begins again.

Teaching Methodology (Step by Step)

1. Ask where rain comes from and where puddles go on a sunny day, and collect the answers on the board.

2. Show a bowl of water in the sun and explain that heat turns water into invisible vapour, which is called evaporation.

3. Explain that vapour rises, cools and becomes tiny drops that gather into clouds, which is called condensation.

4. Explain that heavy clouds drop water as rain, which is called precipitation, and that the water collects in rivers and seas.

5. Draw the whole cycle on the board and let students point to each stage in order.

Classroom Activities

• Water-cycle dance: students act as the sun, water drops, clouds and rain in a circle.

• Cloud in a jar: watch warm water vapour rise and condense on a cold lid to make a tiny cloud.

• Cycle matching: picture cards of evaporation, condensation, precipitation and collection are placed in the right order.

Assessment Questions

1. Name the four stages of the water cycle in order.

2. What makes water evaporate from a river?

3. Where does rainwater go after it falls on land?

Homework

• Draw the water cycle with four labels: evaporation, condensation, precipitation and collection.

• Watch a puddle on a sunny day and write what happens to it after one hour.

Time Allocation

40 minutes
