Lesson Planning

Complete Lesson Plan Book

Class: Class 6

Subject: Science

Medium: English

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: The Solar System: Planets in Order

DM

Unit 1: The Solar System: Planets in Order

Learning Objectives

• Students will name the eight planets in order from the Sun.

• Students will explain that the Sun is the centre of the solar system.

• Students will state one special feature of at least three planets.

Key Concepts

• The solar system is made of the Sun and everything that moves around it, including eight planets, moons, and smaller rocks.

• The eight planets in order from the Sun are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.

• The Sun is a star at the centre of the solar system and gives light and heat to all the planets.

• Planets move around the Sun in paths called orbits, and the Earth takes one year to complete its orbit.

• Jupiter is the largest planet, Mercury is the smallest, and Saturn is famous for its bright rings.

Teaching Methodology (Step by Step)

1. Ask students what they see in the sky at night and what they know about the Sun and the planets.

2. Explain that the solar system is the Sun plus everything that moves around it.

3. Introduce the eight planets one by one in order from the Sun, using a simple diagram.

4. Point out special features: Mercury is closest and smallest, Jupiter is the largest, Saturn has rings.

5. Explain orbits and that the Earth takes one year to go around the Sun.

6. Ask students to repeat the planet order together, then give them the drawing activity.

Classroom Activities

• Planet order race: students arrange planet name cards in order from the Sun and race to get the order right.

• Planet fact hunt: each student finds one interesting fact about a planet and shares it with the class.

• Draw the solar system: students draw the Sun and the eight planets in order and label each one.

Assessment Questions

1. Name the eight planets in order from the Sun.

2. Which planet is the largest, and which planet is closest to the Sun?

3. Why do we see the Moon shine at night even though it makes no light of its own?

Homework

• Draw the solar system with the eight planets in the correct order and label them.

• Write three sentences about the planet Earth and why it is special for living things.

Time Allocation

40 minutes
