# Lesson Planning

## Complete Lesson Plan Book

**Class: I.Com · Class 11**

**Subject: Business Mathematics**

**Medium: English**

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

# Table of Contents

Unit 1: Profit, Loss and Discount in Business

DM

# Unit 1: Profit, Loss and Discount in Business

## Learning Objectives

• Students will calculate profit, loss and profit or loss percentage from cost and selling prices.

• Students will work out a discounted price from a marked price and a discount rate.

• Students will judge whether a shopkeeper's deal is profitable using a short calculation.

## Key Concepts

• Profit is selling price minus cost price; when the result is negative, the business makes a loss.

• Profit or loss percentage is always calculated on the cost price, not on the selling price.

• A discount is a reduction from the marked price, and the price a customer actually pays is marked price minus discount.

• A shopkeeper who sells below cost price makes a loss even if the shop is busy, so the cost price must always be checked first.

• Comparing two offers needs the same basis: the final price after discount, not the size of the discount alone.

## Teaching Methodology (Step by Step)

1. Ask students how a shopkeeper knows whether the day was profitable, and collect their ideas on the board.

2. Work one profit example and one loss example step by step, stressing that percentage is taken on cost price.

3. Work a discount example: a shirt marked at Rs 1,200 with a 20 percent discount sells for Rs 960.

4. Show the common mistake of calculating percentage on the selling price and why it gives a wrong answer.

5. Give students two shop offers and let them calculate which final price is lower.

## Classroom Activities

• Shopkeeper game: pairs take turns as buyer and seller and record cost, marked, discount and selling prices.

• Offer comparison: students calculate the final price of three discounted items and pick the best deal.

• Error hunt: students find the mistake in a worked example where percentage was taken on the selling price.

## Assessment Questions

1. Cost price Rs 500, selling price Rs 650. Find the profit and the profit percentage.

2. Marked price Rs 2,000, discount 15 percent. What does the customer pay?

3. A trader buys 10 pens at Rs 40 each and sells them at Rs 45 each. Profit or loss, and how much in total?

## Homework

• Visit a price tag at home: note the marked price and any discount, and work out the price actually paid.

• Solve: cost price Rs 800, loss 10 percent. Find the selling price.

## Time Allocation

45 minutes
