Lesson Planning

Complete Lesson Plan Book

Class: Class 5

Subject: Mathematics

Medium: English

Academic Year 2026-27

This book is prepared as a teaching guide for teachers.

Table of Contents

Unit 1: Numbers up to 1,000,000: Reading and Writing

Unit 2: Addition and Subtraction of Large Numbers

Unit 3: Multiplication by 2-Digit Numbers

Unit 4: Division with Remainders

Unit 5: Factors and Multiples

Unit 6: Fractions: Types and Comparison

Unit 7: Decimals: Tenths and Hundredths

Unit 8: Geometry: Lines, Angles and 2D Shapes

DM

Unit 1: Numbers up to 1,000,000: Reading and Writing

Learning Objectives

• Students will be able to read and write numbers up to 1,000,000 in figures and words.

• Students will be able to identify the place value of each digit in a 6-digit number.

• Students will be able to compare and order large numbers using place value.

Key Concepts

• Place value chart: ones to hundred-thousands.

• Reading large numbers in words, e.g. 452,310.

• Expanded form of numbers, e.g. 300,000 + 40,000 + 2,000 + 300 + 10.

• Comparing numbers using <, > and =.

Teaching Methodology (Step by Step)

1. Begin with a 5-minute warm-up: ask 2-3 oral questions revising the previous lesson and linking it to Numbers up to 1,000,000: Reading and Writing.

2. Present the key ideas of Numbers up to 1,000,000: Reading and Writing on the board with one clear example or a labelled diagram.

3. Explain each point slowly in simple words, asking a short check-question after every point.

4. Do guided practice: solve 3-4 examples of Numbers up to 1,000,000: Reading and Writing together, inviting students to complete steps on the board.

5. Close with a 5-minute oral recap in which students state one new thing they learned about Numbers up to 1,000,000: Reading and Writing.

Classroom Activities

• Place-value relay: teams build the largest number from digit cards within one minute.

• Number dictation: the teacher calls out numbers in words; students write them in figures.

Assessment Questions

1. Write 706,045 in words.

2. What is the place value of 7 in 472,918?

3. Arrange in ascending order: 98,765, 102,340, 99,999, 100,001.

Homework

• Write any five 6-digit numbers in words and in expanded form.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 2: Addition and Subtraction of Large Numbers

Learning Objectives

• Students will be able to add two 5-digit numbers with carrying.

• Students will be able to subtract 5-digit numbers with borrowing.

• Students will be able to solve word problems involving addition and subtraction.

Key Concepts

• Column addition with carrying across place values.

• Column subtraction with borrowing.

• Checking subtraction by adding.

• Word problems: choosing the correct operation.

Teaching Methodology (Step by Step)

1. Start with rapid-fire mental revision: 5 quick questions from the last lesson connected to Addition and Subtraction of Large Numbers.

2. Demonstrate Addition and Subtraction of Large Numbers step by step on the board while students watch, listen and copy.

3. Move to guided practice: students attempt 2-3 similar items with the teacher's support.

4. Give independent practice: a short written task on Addition and Subtraction of Large Numbers completed individually in notebooks.

5. Check a few notebooks on the spot, correct common mistakes on the board and summarise Addition and Subtraction of Large Numbers.

Classroom Activities

• Board race: two students solve one addition and one subtraction sum; the class checks.

• Shopping-bill activity: add prices of 4-5 items and find change from a given amount.

Assessment Questions

1. Add: 45,678 + 27,945.

2. Subtract: 80,000 - 36,478.

3. A shopkeeper had 95,400 rupees. He spent 38,750 rupees. How much is left?

Homework

• Solve 5 mixed addition and subtraction sums of 5-digit numbers.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 3: Multiplication by 2-Digit Numbers

Learning Objectives

• Students will be able to multiply a 3-digit number by a 2-digit number.

• Students will be able to use the standard column method correctly.

• Students will be able to solve simple word problems on multiplication.

Key Concepts

• Multiplying by ones and tens separately.

• Adding partial products.

• Estimating the product by rounding.

• Multiplication word problems.

Teaching Methodology (Step by Step)

1. Open with a hook: a short story, riddle or real-life example that introduces Multiplication by 2-Digit Numbers.

2. Lead a class discussion on Multiplication by 2-Digit Numbers with 4-5 guiding questions; record key answers on the board.

3. Organise the main activity in pairs or small groups according to the plan for Multiplication by 2-Digit Numbers.

4. Let groups share their work; add corrections and the important points of Multiplication by 2-Digit Numbers.

5. Finish with a quick oral or written check on Multiplication by 2-Digit Numbers and announce the homework.

Classroom Activities

• Step-ladder: each student solves one step of a long multiplication on the board.

• Estimate-then-solve: students first estimate, then compute 23 x 145.

Assessment Questions

1. Multiply: 236 x 14.

2. Find the product of 308 and 27.

3. One box holds 48 books. How many books do 35 boxes hold?

Homework

• Solve 6 multiplication sums: 3-digit by 2-digit numbers.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 4: Division with Remainders

Learning Objectives

• Students will be able to divide a 3-digit number by a 1-digit number.

• Students will be able to find the quotient and remainder correctly.

• Students will be able to check division using multiplication and addition.

Key Concepts

• Division vocabulary: dividend, divisor, quotient, remainder.

• Long division steps.

• Remainder must be smaller than the divisor.

• Checking: divisor x quotient + remainder = dividend.

Teaching Methodology (Step by Step)

1. Begin with 5 minutes of silent or loud reading connected to Division with Remainders.

2. Explain the new words and key ideas of Division with Remainders; write difficult words with meanings on the board.

3. Read the passage or examples of Division with Remainders together, with students taking turns.

4. Students complete a short written exercise on Division with Remainders in their notebooks.

5. Review the answers together, praise good work and give a brief summary of Division with Remainders.

Classroom Activities

• Division detective: students find and fix a deliberately wrong long division on the board.

• Sharing activity: divide 137 counters equally among 4 groups; record quotient and remainder.

Assessment Questions

1. Divide 476 by 7. Write quotient and remainder.

2. Divide 853 by 5 and check your answer.

3. 95 pencils are packed 8 in a box. How many full boxes? How many pencils are left?

Homework

• Solve 5 division sums and check each answer.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 5: Factors and Multiples

Learning Objectives

• Students will be able to list all factors of numbers up to 50.

• Students will be able to find the first five multiples of a number.

• Students will be able to identify prime and composite numbers up to 30.

Key Concepts

• Factor: a number that divides another exactly.

• Multiple: the result of multiplying by whole numbers.

• Prime numbers have exactly two factors.

• Composite numbers have more than two factors.

Teaching Methodology (Step by Step)

1. Begin with a 5-minute warm-up: ask 2-3 oral questions revising the previous lesson and linking it to Factors and Multiples.

2. Present the key ideas of Factors and Multiples on the board with one clear example or a labelled diagram.

3. Explain each point slowly in simple words, asking a short check-question after every point.

4. Do guided practice: solve 3-4 examples of Factors and Multiples together, inviting students to complete steps on the board.

5. Close with a 5-minute oral recap in which students state one new thing they learned about Factors and Multiples.

Classroom Activities

• Factor rainbow: students draw arcs pairing factors of 36 on the board.

• Sieve game: the class crosses out multiples to find primes up to 30.

Assessment Questions

1. List all factors of 28.

2. Write the first five multiples of 9.

3. Is 21 prime or composite? Give a reason.

Homework

• Find factors of 24, 35 and 40; list first five multiples of 7.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 6: Fractions: Types and Comparison

Learning Objectives

• Students will be able to identify numerator and denominator in a fraction.

• Students will be able to name proper, improper and mixed fractions.

• Students will be able to compare fractions with the same denominator.

Key Concepts

• Fraction as part of a whole.

• Proper, improper and mixed fractions.

• Converting mixed to improper fractions.

• Comparing like fractions.

Teaching Methodology (Step by Step)

1. Start with rapid-fire mental revision: 5 quick questions from the last lesson connected to Fractions: Types and Comparison.

2. Demonstrate Fractions: Types and Comparison step by step on the board while students watch, listen and copy.

3. Move to guided practice: students attempt 2-3 similar items with the teacher's support.

4. Give independent practice: a short written task on Fractions: Types and Comparison completed individually in notebooks.

5. Check a few notebooks on the spot, correct common mistakes on the board and summarise Fractions: Types and Comparison.

Classroom Activities

• Paper folding: students fold strips to show halves, quarters and eighths.

• Fraction cards: match each fraction card with its shaded diagram.

Assessment Questions

1. Identify numerator and denominator in 5/8.

2. Convert 3 2/5 into an improper fraction.

3. Which is greater: 4/7 or 6/7? Explain.

Homework

• Draw and shade diagrams for 3/4, 5/3 and 2 1/2.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.

Unit 7: Decimals: Tenths and Hundredths

Learning Objectives

• Students will be able to read and write decimals up to two decimal places.

• Students will be able to convert between fractions and decimals for tenths and hundredths.

• Students will be able to compare decimals using place value.

Key Concepts

• Decimal point separates whole and fractional parts.

• Tenths and hundredths places.

• 0.5 = 1/2 and 0.25 = 1/4.

• Comparing decimals digit by digit.

Teaching Methodology (Step by Step)

1. Open with a hook: a short story, riddle or real-life example that introduces Decimals: Tenths and Hundredths.

2. Lead a class discussion on Decimals: Tenths and Hundredths with 4-5 guiding questions; record key answers on the board.

3. Organise the main activity in pairs or small groups according to the plan for Decimals: Tenths and Hundredths.

4. Let groups share their work; add corrections and the important points of Decimals: Tenths and Hundredths.

5. Finish with a quick oral or written check on Decimals: Tenths and Hundredths and announce the homework.

Classroom Activities

• Money link: students write prices like Rs 45.50 as decimals and read them aloud.

• Decimal line-up: students order decimal cards from smallest to largest on a number line.

Assessment Questions

1. Write 7/10 and 23/100 as decimals.

2. Write 0.6 as a fraction in simplest form.

3. Which is greater: 0.45 or 0.5?

Homework

• Write 5 prices from a shop receipt as decimals and order them.

Time Allocation

Two periods (80 minutes): 10 min warm-up and revision, 25 min concept presentation, 25 min guided and independent practice, 15 min activity and assessment, 5 min closure and homework.

Unit 8: Geometry: Lines, Angles and 2D Shapes

Learning Objectives

• Students will be able to identify parallel, perpendicular and intersecting lines.

• Students will be able to name acute, right and obtuse angles.

• Students will be able to identify properties of squares, rectangles and triangles.

Key Concepts

• Parallel lines never meet; perpendicular lines meet at 90 degrees.

• Types of angles: acute, right, obtuse.

• Properties of square, rectangle and triangle.

• Sides and vertices of 2D shapes.

Teaching Methodology (Step by Step)

1. Begin with 5 minutes of silent or loud reading connected to Geometry: Lines, Angles and 2D Shapes.

2. Explain the new words and key ideas of Geometry: Lines, Angles and 2D Shapes; write difficult words with meanings on the board.

3. Read the passage or examples of Geometry: Lines, Angles and 2D Shapes together, with students taking turns.

4. Students complete a short written exercise on Geometry: Lines, Angles and 2D Shapes in their notebooks.

5. Review the answers together, praise good work and give a brief summary of Geometry: Lines, Angles and 2D Shapes.

Classroom Activities

• Angle hunt: students find and label 5 angles in classroom objects.

• Shape sorting: classify cut-out shapes by number of sides and angles.

Assessment Questions

1. Draw one pair of parallel lines and one pair of perpendicular lines.

2. Name the angle: 35 degrees, 90 degrees, 120 degrees.

3. How many sides and vertices does a rectangle have?

Homework

• Draw 3 objects from home and label the angles in them.

Time Allocation

Two periods (80 minutes): 10 min revision, 20 min explanation with examples, 30 min practice and class activity, 15 min oral and written check, 5 min homework briefing.
